

THIS MASS CYTOMETRY SYSTEM AIDS RESEARCHERS WITH ANALYZING PROTEIN STRUCTURE CELL PROPERTIES.

We're powering devices that are transforming the understanding of human health.

DC supplies high performance compute solutions for this company's device portfolio that acquire and analyze large-scale data sets for translational and clinical research meeting the demands for image and data processing in Mass Cytometry.

Our strong cross-functional teams support this customer at every stage. We work closely with them to provide value added engineering services, technology and cost reduction ideas, suggest product improvements, and deliver with consistency and high quality.

We profiled their application software, identified a product in the DC roadmap that supports the performance and interface requirements of their device *and* provides a longer lifecycle, saving them nearly 40%

TECHNOLOGY USE CASE: A8103 / Control Processing

- Data/Image Processing
- Control Processing
- Planning/Viewing
- Storage
